RE: Recommendation Letter for Ms. Muyan Cheng

Dear Admission Committee,

My name is Guangxu Li. I am an associate professor in the School of Economics and Management at University of Electronic Science and Technology of China and a visiting scholar in the Department of Computer and Artificial Intelligence at University of Granada. I am very happy to have the opportunity to recommend one of my outstanding students- Muyan Cheng.

Muyan Cheng was admitted by the "Internet +" Experimental Class for General Talents of University of Electronic Science and Technology of China, and she majors in Internet finance and Artificial Intelligence. She was trained to be an excellent interdisciplinary talent. I came to know her when she applied to for my approval to be the supervisor for her graduation project. After the interview, she was impressive to me as a student hardworking and capable and willing to challenge herself. So I admitted her and agreed to be her supervisor.

Muyan Cheng is a quick learner with a strong analytical ability. As her supervisor, I meet her regularly and assign her a task to do such as collecting relevant materials about the graduation project. When we meet the next time, she gives me a 10-15 minutes presentation. The topic she selected was related to online loans. In addition to the basic information of online loans, she also had an in-depth analysis using social data for credit evaluation, which is refreshing.

Muyan has also participated in the Mathematical Contest in Modeling and won the Finalist Prize. This is an outstanding achievement as the winners of this award accounted for only 1% of the global participants. This demanding competition required all the participants to work in a group of three and build mathematical models to solve problems within four days and at the same time they are expected to write a report of about 20 pages. She has strong research ability and is able to work under pressure.

To summarize, Muyan is a good student who has the intelligence, motivation, and maturity to be in your master program. If you have any further questions about her or this recommendation, please do not hesitate to contact me.

Yours sincerely,

Guangxu Li
